***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-5 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Okamoto Pat. No. 6,887,407.

3. Okamoto discloses a mold closing process section 62 which advances a movable platen 4 so as to perform mold closing by a movable mold and a stationary mold 3 disposed in opposition to the movable mold (Fig. 1). Okamoto discloses a movable platen position determination section which determines whether or not the movable platen has reached an injection start position at which the movable mold does not come into contact with the stationary mold (col. 5, lines 24-30). Okamoto discloses an injection processing section which starts an injection step when the movable platen reaches the injection start position (col. 5, lines 55-58). A pressure increasing step is started with start of the injection step since the pressure of the injection material will inherently increase with the start of the injection step. The injection processing section starts the injection step before completion of a mold closing step in Okamoto (col. 5, lines 55-58). The injection processing section ends the injection the injection step

before completion of a pressure increasing step since the mold is moved to close after the resin melt is injected in Okamoto (col. 6, lines 23-26).

4. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Abe et al. Pat. No. 6,331,263. See col. 4, lines 3-18.

5. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Obayashi Pat. No. 5,547,619. See abstract and col.2, lines 13-15.

### ***Response to Arguments***

6. Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection. The newly cited references show the movable mold not contacting the stationary mold which the injection is started.

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
